

COMPANY PROFILE

Helping you scale up your IT Initiatives with an efficient and productive service delivery capability

COMPANY INFORMATION

Optimum Solutions is a rapidly growing **IT Services** company offering a wide range of technology services for business organizations. Our services include IT consulting services, Application Management services, Business Intelligence/ Mobility/ Analytics services and Infrastructure Management services.

We have a track record of more than 17 years of meeting and exceeding customer expectations. Starting in 1997, we have grown to over 2100 full time employees across Singapore, China, Philippines, Malaysia, and India. We support several customers in Banking & Financials, Manufacturing, Retail & Distribution, Technology and Services sectors.

IT SERVICES

Over the last several years, we have successfully executed a large number and variety of IT engagements focused around the following services:

Application Management Services

We support our customers across the full life cycle of their project implementations and other IT services requirement, specifically focused on:

- Packaged Solutions
- Custom Solutions

We help our customers develop, maintain and support their portfolio of their business applications – both packaged and custom applications. This service helps our customers focus their in-house IT expertise on more strategic technology initiatives while leaving the routine management functions to a specialized service provider.

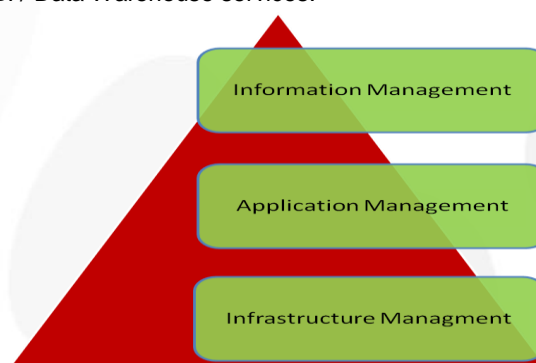

Application Management involves comprehensive and continuous drive towards improving the quality and effectiveness of the application to ensure that it meets organizational objectives.

Information Management Services:

We work with our customers on Business Intelligence / Data Warehousing implementations to improve the overall effectiveness of decision making. Our services include design & development and on-going maintenance of BI platforms, Operational Reports and Data Warehouses.

We also provide Data Analytics services from our offshore development centers in addition to above services.

We have worked with various tools and platforms as part of our BI / Data Warehouse services.

Infrastructure Management Services:

We provide Infrastructure Management and System Administration services on a long term basis from our offshore development centers.

This service involves monitoring of servers, database and applications, and providing Level 1 / Help Desk support to the users, managing network, managing storage, etc.

Our expertise lies in our ability to create a right mix of skilled engineers and management processes geared to meet and exceed the SLA requirements of our customers.

OUR STRENGTHS

We offer the following benefits to our customer partners:

- **Robust technical solution:** We are a deeply technology-focused company with strong skills and experience in our specific focused set of technologies and platforms
- **Cost-effective service provider:** With the help of our Singapore based operations, we can provide cost-effective and highly productive services.
- **Singapore Operations:** Singapore's strength in infrastructure, stable resource base, helps us be highly productive and ultimately most effective for our customers.
- **Right-sized organization:** We are a right-sized organization for small and medium sized engagement. We provide flexibility as well as structured processes and long term reliability.
